

I cannot receive over broadcast radio anything remotely like the programming I receive over satellite radio. I use the local weather and traffic info on satellite radio because it is ALWAYS available to me. I don't have to "wait for the eights" nor do I have to sit through commercials while I wait for the relevant info.

I respectfully request that you reject NAB Petition 04-160. It appears to me to be nothing more than a means to protect the giant players already entrenched in an industry that is unwilling to compete fairly with newer, more imaginative, and more relevant players.

Thanks,

John R. Moore
